BASIC PRODUCT MAINTENANCE AND TROUBLESHOOTING

OILING SHREDDER

All cross-cut shredders require oil for peak performance. If not oiled, a machine may experience diminished sheet capacity, intrusive noise when shredding and could ultimately stop running. To avoid these problems, we recommend you oil your shredder each time you empty your waste bin.

FOLLOW OILING PROCEDURE BELOW AND REPEAT TWICE

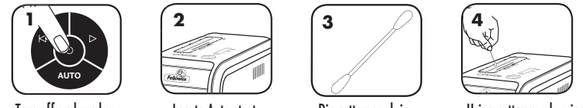
1. *Apply oil across entry
2. Shred one sheet
3. Press and hold forward (▷) 2-3 seconds

CLEANING AUTO-START INFRARED SENSORS

Paper detection sensors are designed for maintenance free operation. However, on rare occasions the sensors may become blocked by paper dust causing the motor to run even if there is no paper present

(Note: two paper detection sensors are located in the center of the paper entry).

TO CLEAN THE SENSORS



1. Turn off and unplug shredder
2. Locate Auto-start infared sensor
3. Dip cotton swab in rubbing alcohol
4. Using cotton swab, wipe away any contamination from the paper sensors

⚠CAUTION ***Only use a non-aerosol vegetable oil in long nozzle container such as Fellowes 35250***

PREVENTIVE MAINTENANCE AND MISCELLANEOUS TROUBLESHOOTING

- Self Cleaning Cycle: Shredder periodically cycles in forward and reverse lasting 3-6 seconds (SB-125Ci).
- Empty wastebasket when bin full indicator lights up.
- Shredder won't run if the door is open, or bin needs to be emptied.
- Maintenance is an important part of protecting your investment. Don't forget our oil (35250) and shredder bags (36054).
- When shredding for a prolonged period of time, the motor can become warm and require a cool down period. When this occurs the overheat indicator will alert you to the problem. This model will require 45 minutes to cool down.
